

How far each event's close1 prices must move to reach opening-model EV targets

0% movement = already meets target at close1 prices; 100% = actual opening prices. First crossing on a 1% grid.

Opening model throughout. MDD 0.40, N 250, z 0.5. Expected returns, not realized performance.

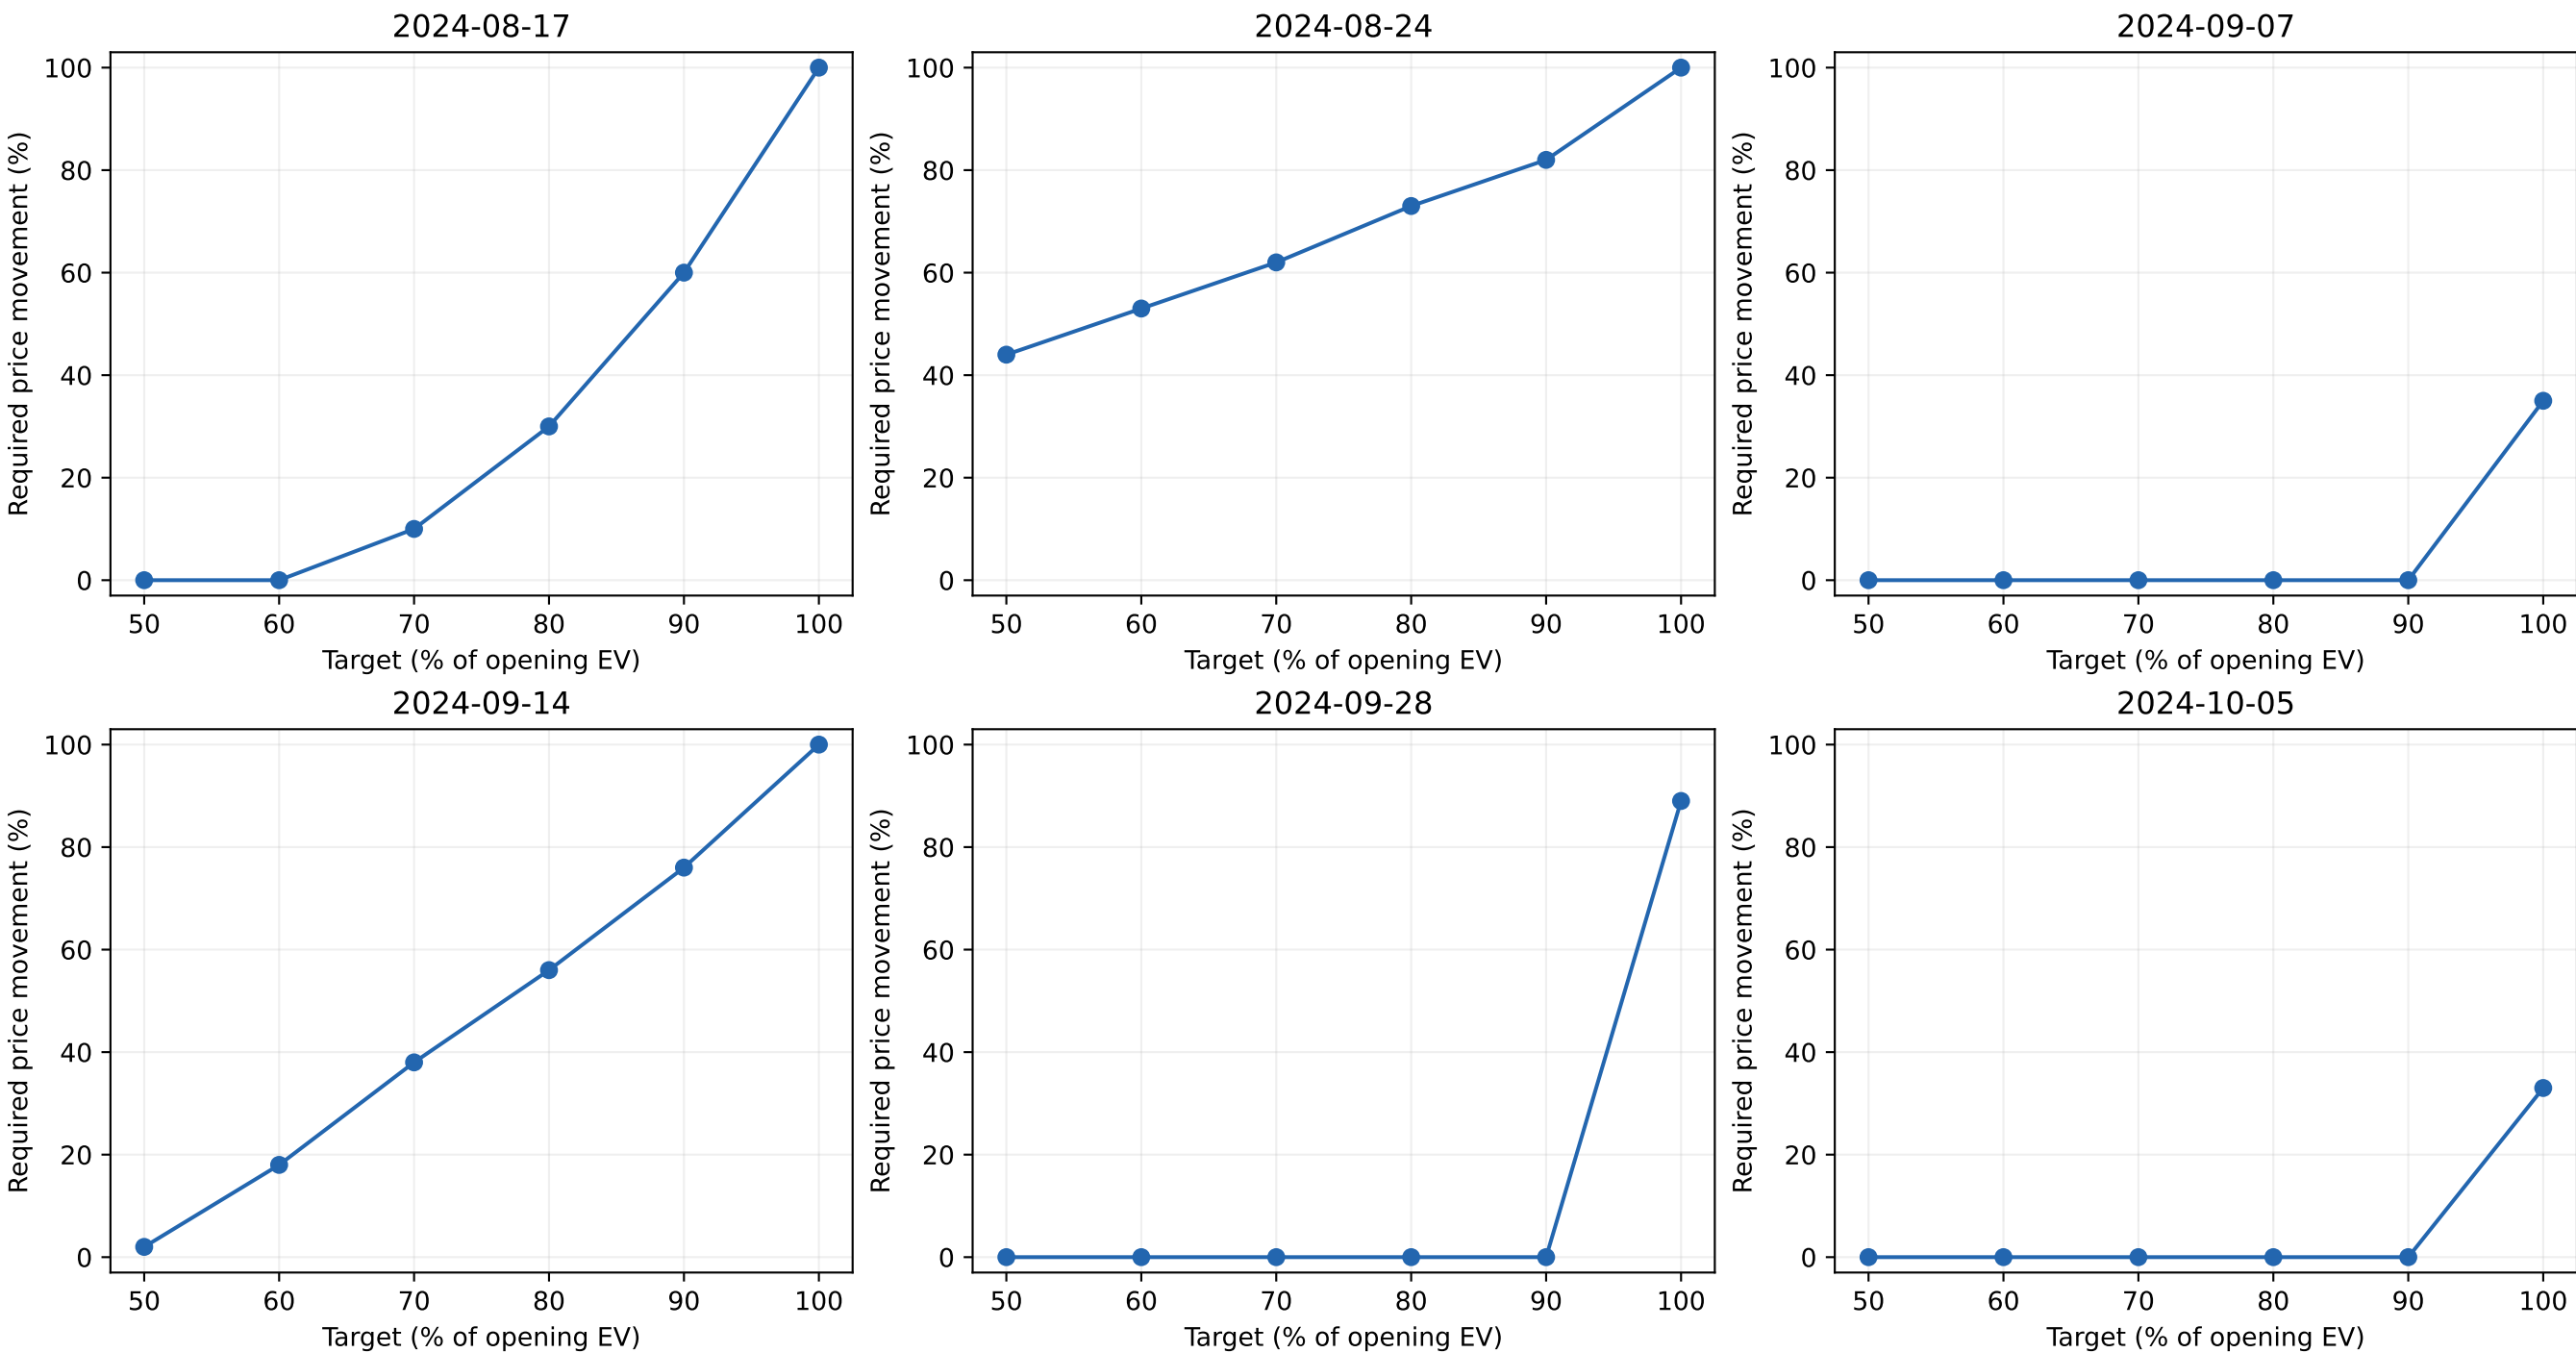

How far each event's close1 prices must move to reach opening-model EV targets
